CHAPTER I

REGIONAL DEMOGRAPHIC AND LAND USE ANALYSIS

A. Population Characteristics and Their Implications for Evacuation Dynamics

1. Overall Population¹

In February 2007, the University of Florida's Bureau of Economic and Business Research (BEBR) estimated that the permanent resident population of the Apalachee Bay area on April 1, 2006 (Table I-1a), was 463,994, up from 411,486 (8.9%) from the 2000 Census. The Apalachee Bay area continues to be the region with the smallest population; however, BEBR projects the population will reach 497,820 in 2010 and 530,896 in 2015. This represents increases of 7.29% and 6.64%, respectively, in comparison to the 2000 Census.

Projected population growth in the Apalachee Bay area is not evenly distributed within the region. Wakulla County is projected to grow by more than 35% between 2006 and 2015, whereas average growth in the other eight counties in the region ranges from 8.4 – 14.9%. The coastal areas that fall into currently-defined storm surge and hurricane evacuation zones in Jefferson, Franklin and Gulf Counties are expected to grow by about 10% between 2006 and 2015. The region's growing population will continue to present challenges for evacuations due to other hazards (inland flooding, wildfires, hazardous materials accidents, etc.).

¹ Population estimates and projections customarily distinguish between the *permanent resident population* in a jurisdiction (people who reside in the location year-round or at least half of the time) and the *seasonal population* (people who reside in the location only a portion of the year or who are visitors, such as tourists). The permanent resident population is further broken into those who reside in *households* (occupied housing units) and those who are in *group quarters*, such as correctional facilities, nursing homes, military quarters, group homes, etc. The decennial census and the Census Bureau's new American Community Survey (ACS) present results for the permanent resident population, but not for the seasonal population. However, both the census and the ACS present data on vacant housing units, including those that are for seasonal use. Typically, local jurisdictions use these seasonal housing unit estimates, along with hotel and motel inventories, to prepare estimates and projections of the seasonal population for planning purposes. The estimates and projections prepared by the University of Florida's Bureau of Economic and Business Research (BEBR) also refer to the permanent resident population. Most of the data presented in this section is drawn from the sample portion of the 2000 Census of Population and Housing (Summary File 3) and from the 2006 ACS. The latter was tabulated only for the 40 counties that had a 2006 population of at least 65,000 permanent residents, so there is no 2006 ACS data for the 27 smallest counties in the State of Florida – in those counties, the 2006 tables will show "N.A." in all cells. Note that the annual ACS is collected for a much smaller sample than the 2000 Census, resulting in much larger margins of error. In addition, there are differences in the methodology that can affect the meaning of the data collected. As a result, comparisons should be made with caution. In some cases, although 2006 ACS data was tabulated for a county, the small sample size resulted in insufficient data to fill all of the cells in a given table – in those cases, the 2006 tables will show "N.A." in selected cells.

2. Group Quarters Population

In 2000, there were 30,663 Apalachee Bay area residents living in group quarters (7.45% of the population); 20,255 of these were institutionalized in correctional facilities, nursing homes and juvenile institutions, while the other 10,408 were in other group quarters, such as college dormitories, group homes and military quarters (Table I-11 and Map P5). The remaining 380,823 residents lived in households. Leon County had the largest share of the population in group quarters (13,581), but Jackson County had the largest institutionalized population (5,690). The group quarters population is a significant component of those with “special needs” that require special procedures in the event of an evacuation.

3. Housing Units by Type

Of the 179,411 housing units in the Apalachee Bay area at the time of the 2000 Census, 54.3% were single-family, 25.1% were multi-family and the other 20.6% were mobile homes, boats, recreational vehicles (RVs) or others used as dwelling units (Table I-4). Of those units, 21,541 were vacant, with the highest vacancy rates found among single-family homes (Map H1). Mobile homes, boats and RVs are a much larger component of the housing stock in the Apalachee Bay area than in the State of Florida as a whole (where 12.0% of all units were classified in this category).

4. Occupied Housing Units (Households)

There were 157,870 occupied housing units (households) in the Apalachee Bay region in 2000, 72.5% of which were occupied by owners and 23.5% by renters (Table I-4). The ownership ratio in the region was comparable to the State of Florida average (70.1%).

5. Household Size

In 2000, the average household size (number of persons per occupied unit) was 2.41 (Table I-5), which was lower than the State of Florida average of 2.46. The average household size was highest in Gadsden County (2.69) and lowest in Franklin County (2.28). In the region overall, renters, who are mostly concentrated in multi-family units, had a lower household size (2.13) than owners (2.56), who are more heavily concentrated in single-family units. However, in four of the nine counties (Gadsden, Gulf, Jefferson and Liberty) in the Apalachee Bay area, renters had a higher household size than owners.

6. Seasonal Dwelling Units

In 2000 there were 5,943 vacant dwelling units in the Apalachee Bay region that were for seasonal, recreational or occasional use, representing 27.6% of all units (Table I-6). In addition, according to licensing records of the Florida Department of Business and Professional Regulation (Table I-3), in 2007 there were 37 hotels with 3,357 rooms, 88 motels with 4,479 rooms, and 14 bed and breakfast inns with 78 rooms in the Apalachee Bay region. Together, these units house a seasonal population that is in addition to the permanent resident population estimated above. Considering that many of these units are in vulnerable areas, the proportion of seasonal units and hotel/motel units that are occupied at any point in time will have an important impact on the total population that may participate in an evacuation.

7. Vehicles per Household

There were 12,749 households in the Apalachee Bay region in 2000 that had no vehicle (8.1% of all households) – roughly two-thirds of these were renters (Table I-7 and Map H8). This was much higher than the average for the State of Florida as a whole (8.1%), and represents a significant number of households that could need transportation assistance in the event of a major evacuation.

8. Age Composition

In 2000, the population of the Apalachee Bay region included 42,957 people who were at least 65 years of age or older, which represented 10.4% of the total population (Table I-9). This compared to 17.6% for the State of Florida as a whole. Over a quarter of the region's elderly residents (12,114) lived alone (Table I-11), and many lived in coastal areas (Map P6). Moreover, 5,155 residents were at least 85 years old.

9. Race / Ethnicity

The Black or African American population, which includes those born abroad as well as those born in the United States, included 122,757 residents (29.8% of the total population) in 2000. The Hispanic population included 13,961 residents of the total 411,486 individual living in the Apalachee Bay region in 2000.

10. Place of Birth and Citizenship

In 2000, 390,894 (95%) of the Apalachee Bay region population was born in the United States (Table I-12a). The vast majority (58.5%) of the residents were born in Florida. Only 5,283 residents were born outside of the United States; however, 8,909 residents were not citizens.

11. Linguistic Isolation

The level of linguistic isolation (households where no one 14 years or older speaks English "very well") is relatively small in the Apalachee Bay region. In 2000, 1,650 households (1.04%) were classified as linguistically isolated (Table I-13). Asian and Pacific Island languages were spoken in 22.7% of these households (Map P8). While this population is minimal, the lack of availability of radio and television broadcasts makes this problematic for reaching this public during an evacuation.

12. Labor Force

In 2000, there were over 125,160 people 16 years old and over in the Apalachee Bay region (37.9%) who were not in the labor force (Table I-15). This was a little less than the share of the inactive population in the State of Florida as a whole (41.3%), due at least in part to the higher proportion of retirees in other parts of the State.

13. Poverty Status

There were 68,070 Apalachee Bay region residents in 2000 that lived in households with incomes below the poverty level (Table I-16), accounting for 17.9% of the total population. Poverty rates were highest among children (23.2%), but 16.7% of elderly residents also lived below the poverty level. The poor elderly, especially those living alone, may represent a significant portion of those households without vehicles, which constitutes a substantial challenge for evacuation planning.

14. Small Area Dwelling Unit and Population Data

None of the counties in the Apalachee Bay are produce official population projections. A calculation using BEBR was used to estimate population figures.

B. Future Land Use Analysis

The Apalachee Bay region has a total area of over 3.7 million acres, of which 5,805 square miles are land area and 951 square miles are water. It is bounded on the east by Taylor and Madison Counties, on the west by Holmes Washington and Bay Counties, Hendry County and Collier County, on the north by Georgia and Alabama and on the south by the Gulf of Mexico. The region is home to a total resident population of 411, 486 in 2000, the majority of which live either on the coastline or in Leon County.

Table I-1a. Resident Population² by Age, April 1, 2006, 2010 and 2015						
Apalachee Age Categories	Absolute Number			% of Total Population		
	2006	2010	2015	2006	2010	2015

³ A housing unit is a house, an apartment, a mobile home, a group of rooms, or a single room occupied (or if vacant, intended for occupancy) as separate living quarters. Separate living quarters are those in which the occupants live separately from any other people in the building and that have direct access from the outside of the building or through a common hall. Both occupied and vacant housing units are included in the housing unit inventory. Boats, recreational vehicles (RVs), vans, tents, and the like are housing units only if they are occupied as someone's usual place of residence. Vacant mobile homes are included provided they are intended for occupancy on the site where they stand. Vacant mobile homes on dealers' lots, at the factory, or in storage yards are excluded from the housing inventory. Also excluded from the housing inventory are quarters being used entirely for nonresidential purposes, such as a store or an office, or quarters used for the storage of business supplies or inventory.

⁴ Table I-5 presents the number of residents in the occupied housing units shown in Table I-4 for 2000 by type of housing unit. They also show the average number of residents by type of housing unit, which can be used in transportation models to estimate the number of evacuating people.

Table I-6. Number of Vacant Units by Vacancy Status⁵, 2000

Apalachee Vacancy Status	Vacant Units	%
For rent	6,917	32.11%
For sale only	2,531	11.75%
Rented or sold, not occupied	1,215	5.64%
For seasonal, recreational, or occasional use	5,943	27.59%
For migrant workers	136	0.63%
Other vacant	4,799	22.28%
Total	21,541	100.00%

Table I-8. Number of Vehicles by Tenure and Vehicles per Occupied Unit, 2000

Apalachee Vehicles Available	Number of Vehicles by Tenure			% of Vehicles in Occupied Units		
	Owner	Renter	Total	Owner	Renter	Total
Aggregate Number of Vehicles	193,875	71,484	265,359	73.06%	26.94%	100.00%
Vehicles per Occupied Unit	1.87	1.32	1.68			

Source: US Bureau of the Census, 2000 Census of Population and Housing (Summary File 3).

⁵ Vacancy status and other characteristics of vacant units were determined by census enumerators obtaining information from landlords, owners, neighbors, rental agents, and others. Vacant units for seasonal, recreational, or occasional use are vacant units used or intended for use only in certain seasons, for weekends, or other occasional use throughout the year. Seasonal units include those used for summer or winter sports or recreation, such as beach cottages and hunting cabins. Seasonal units also may include quarters for such workers as herders and loggers. Interval ownership units, sometimes called shared-ownership or time-sharing condominiums, also are included in this category. Vacant migrant worker units include those intended for occupancy by migrant workers employed in farm work during the crop season. (Work in a cannery, a freezer plant, or a food-processing plant is not farm work.)

⁶ These data show the number of passenger cars, vans, and pickup or panel trucks of 1-ton capacity or less kept at home and available for the use of household members. Vehicles rented or leased for 1 month or more, company vehicles, and police and government vehicles are included if kept at home and used for non-business purposes. Dismantled or immobile vehicles are excluded. Vehicles kept at home but used only for business purposes also are excluded.

Table I-9. Resident Population by Gender and Age, 2000						
Apalachee Age Categories	Absolute Number			% of Total Population		
	Male	Female	Total	Male	Female	Total
Age under 5 years	11,732	11,817	23,549	5.79%	5.65%	5.72%
Age 5 to 17 years	34,637	33,253	67,890	17.11%	15.91%	16.50%
Age 18 to 24 years	31,870	34,374	66,244	15.74%	16.44%	16.10%
Age 25 to 34 years	30,337	27,623	57,960	14.98%	13.22%	14.09%
Age 35 to 44 years	31,957	31,490	63,447	15.78%	15.07%	15.42%

Table I-10. Resident Population by Race and Ethnicity⁷, 2000						
Apalachee Race Categories	Ethnicity – Hispanic or Latino			% of Total Population		
	Non-Hisp	Hispanic	Total	Non-Hisp	Hispanic	Total
White alone	263,354	8,390	271,744	66.25%	60.10%	66.04%
Black or African American alone	121,853	904	122,757	30.65%	6.48%	29.83%
Other race alone and 2+ races	12,318	4,667	16,985	3.10%	33.43%	4.13%
Total	397,525	13,961	411,486	100.00%	100.00%	100.00%

Source: US Bureau of the Census, 2000 Census of Population and Housing (Summary File 3).

⁷ Race and ethnicity are separate categories in both the 2000 Census and the 2006 American Community Survey (ACS). For each person the surveys included two separate questions. The first asks whether each person in the household considers himself/herself to be of Hispanic or Latino origin (ethnicity). The second asks each person in the household to identify one or more racial categories that should be used to classify his/her racial makeup. Both questions request the respondent to classify himself/herself, rather than having a Census Bureau employee assign a classification. The tables presented here are cross-tabulations of the two characteristics. Race is tabulated into three categories: (1) White persons who identified only one race (White alone); (2) Black or African American persons who identified only one race (Black or African American alone); and (3) persons of other races who identified only one race (Other race alone) and those who identified two or more races, combined into a single category. For each race category, the totals were calculated for those who indicated that they were of Hispanic or Latino origin and those who indicated that they were not.

Table I-11. Resident Population by Age, Household⁸ Type and Relationship, 2000						
Apalachee Household Type, Relationship	Number of Persons, by Age			% of Total Population		
	Under 65	65+	Total	Under 65	65+	Total
In households	340,864	39,959	380,823	92.49%	93.02%	92.55%
In family households	273,602	26,937	300,539	74.24%	62.71%	73.04%
In non-family households	67,262	13,022	80,284	18.25%	30.31%	19.51%

Table I-12. Resident Population by Place of Birth and Citizenship Status, 2000		
Apalachee Place of Birth	Absolute Number	%
Native - Born in state of residence	240,527	58.45%
Native - Born in other state in the US	150,367	36.54%
Native - Born outside the United States	5,283	1.28%
Foreign-born - Naturalized citizen	6,400	1.56%
Foreign-born - Not a citizen	8,909	2.17%
Total	411,486	100.00%

Source: US Bureau of the Census, 2000 Census of Population and Housing (Summary File 3).

⁸ A household includes all of the people who occupy a housing unit. (People not living in households are classified as living in group quarters.) A family includes a householder and one or more other people living in the same household who are related to the householder by birth, marriage or adoption. All people in a household who are related to the householder are regarded as members of his or her family. A family household may contain people not related to the householder, but those people are not included as part of the householder's family in census tabulations. Not all households contain families since a household may be comprised of a group of unrelated people or of one person living alone (non-family households).

Table I-13. Households by Language and Linguistic Isolation⁹, 2000						
Apalachee Language Spoken in the Household	Households by Linguistic Isolation			Linguistic Isolation (%)		
	Isolated	Not Isolated	Total	Isolated	Not Isolated	Total

⁹ A household in which no person 14 years old and over speaks only English and no person 14 years old and over who speaks a language other than English speaks English "very well" is classified as "linguistically isolated." In other words, a household in which all members 14 years old and over speak a non-English language and also speak English less than "very well" (have difficulty with English) is "linguistically isolated." All the members of a linguistically isolated household are tabulated as linguistically isolated, including members under 14 years old who may speak only English.

¹⁰ The data on disability status were derived from answers to two long-form questionnaire items. The first was a two-part question that asked about the existence of the following long-lasting conditions: (a) blindness, deafness, or a severe vision or hearing impairment (sensory disability) and (b) a condition that substantially limits one or more basic physical activities, such as walking, climbing stairs, reaching, lifting, or carrying (physical disability). This question was asked of a sample of the population 5 years old and over. The second was a four-part question that asked if the individual had a physical, mental, or emotional condition lasting 6 months or more that made it difficult to perform certain activities. The four activity categories were: (a) learning, remembering, or concentrating (mental disability); (b) dressing, bathing, or getting around inside the home (self-care disability); (c) going outside the home alone to shop or visit a doctor's office (going outside the home disability); and (d) working at a job or business (employment disability). Categories (a) and (b) were asked of a sample of the population 5 years old and over; (c) and (d) were asked of a sample of the population 16 years old and over. For data products that use a disability status indicator, individuals were classified as having a disability if any of the following three conditions were true: (1) they were 5 years old and over and had a response of "yes" to a sensory, physical, mental or self-care disability; (2) they were 16 years old and over and had a response of "yes" to going outside the home disability; or (3) they were 16 to 64 years old and had a response of "yes" to employment disability.

Table I-15. Resident Population 16 Years and Over by Gender and Employment Status, 2000
